Information Disclosure Statement

The information disclosure statement filed October 23, 2003 has been considered and has been made of record.

Obviousness-type Double Patenting Rejection

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-23 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-22 of U.S. Patent No. 6,303,744 in view of Hayashi et al (USP 5,914,385). The instantly claimed polyimide having improved thermal-oxidative stability having a specific dicarboxylic acid endcap 2,3-dimethyl-1,2,3,6-tetrahydrophthalic anhydride, the process of preparing the polyimide, a fiber-reinforced high temperature polyimide matrix composite comprising a fibrous material impregnated with an effective amount of the instantly claimed thermal-oxidatively stable polyimide and the process of preparing and the resulting prepreg; is viewed as being obvious in view of the patent claiming a thermal-oxidatively

stable polyimide prepared employing overlapping reactants as instantly claimed. Although, the patent differs in not claiming the polyimide is endcapped with the specifically claimed dicarboxylic acid endcap nor that the polyimide is used to fabricate a fibr-reinforced prepreg. However, Hayashi et al teaches that polyimide resin are used to produced prepregs and a method of producing. In view of the teaching of Hayashi, it would have been obvious to one of ordinary skill in the art at the time the invention was made that the themal-oxidative stable polyimide as instantly claimed could have been used to preparing prepregs.

Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. These references are cited to show the state of the art of polyimides and composites prepared using polyimides; Feger, Meador'699 and Frimer.
